The following worksheets are intended as a review for you in preparation for the first day of class. Fractions, positive and negative numbers, distributive property, order of operations, and solving basic one and two step equations are basic concepts that are assumed to be mastered prior to this class. Please have these worksheets completed (without the aid of a calculator) and bring them with you on the first day of class, August 17, 2020. Selected answers are provided for you to check. This packet will count as a homework assignment and will be assessed on a quiz during the first few days of class.
